

THE REVOLUTION PACKAGE

Keep your Open-Air Rock'n!

Part # V222G110

Proven on OVER 30 ppm of IRON!!!

- Minimal Back-wash Waste
- Eliminates Tank Flushing
- Increases Contact Time
- Reduces Maintenance
- Extends Pump Life

THE REVOLUTION PACKAGE

Recommended Package Usage

- Anytime it is preferred to have a "clean" Open-Air tank
 - Between 1-4 ppm iron it is a quality idea
 - Between 4-7 ppm iron it is recommended
- Between 7-12 ppm iron it is strongly recommended
- Iron above 12 ppm, call in for best application practices

Applied Technology

The ReVolution Package combined with an Open-Air System is like nothing you have seen before. Using LOW-pressure filtration, The ReVolution Package continuously filters water inside the Open-Air. Once every three days, it back-washes the media tank with high pressure / filtered water from the Open-Air System. This combination does a remarkable job of filtering iron and manganese alike while keeping the Open-Air "clean". The ReVolution Package eliminates tank flushing, improves pump life, and increases contact time all while reducing maintenance on the Open-Air and other treatment equipment down line.

Use the ReVolution on:
 G130 Series Tanks
 G140 Series Tanks
 Enhance Existing Systems
 Atmospheric Tanks

Filtered water going back to the Open-Air near the chlorine basket

Low-pressure water coming from the ReVolution pump inside the Open-Air.

High pressure water from after the Open-Air but before additional treatment equipment (back-washing water)

Drain Water
